

Hannah Solar Government Services, LLC

We are an engineering and construction company that specializes in designing, building and maintaining large scale solar energy microgrid systems. Our company was founded 12 years ago and is owned/operated by a former 1-75th 11B. Over 30% of our team are military veterans. Our construction work is all over the US as well as some overseas work. Most of our work is for the US Government. We have built/maintained solar energy systems in 17 states within CONUS as well as in Africa, Kwajalein Atoll, Wake Island, Hawaii, Virgin Islands and Puerto Rico. Our customers include all branches of DOD, FAA, DEA, NASA, CDC, GSA, Federal Bureau of Prisons, State Department, National Park Service, and the VA.

What does that mean for transitioning Rangers?

Our team prefers hiring Veteran's due to their teamwork, self-discipline, sense of mission accomplishment and core values. Our culture is based on the values and ethics that are familiar to Rangers. We will provide formal and on-the-job training to transition you to a good paying career in the Solar Energy Industry which is an industry with a great long-term future. There are two main tracks after some initial basic solar construction experience that you can choose. You can either focus on becoming a licensed Journeyman Electrician or you can focus on become a Construction Site Manager/Superintendent. For each career path, there are training, experience and certification requirements that our company will help you achieve over time. All you need to bring to our team is a desire live the ethics of the Ranger Creed and a commitment to work further, faster and fight harder than anyone else in the solar industry.

What do we expect from you?

The company is based in the Charleston, SC metro area; one of the best places to live in the country. However, this job requires that you are TDY about 90% of the time away from Charleston on job sites all over CONUS and OCONUS. You may be TDY at a job site anywhere from 1-6 months before you move to the next work location. There will be occasional travel back home for R&R. For this job you also have to love being in the field year-round. Construction work is an outdoor sport much like Ranger life, except hotels and restaurants instead of poncho liners and MRES. If you have a young family who have been counting the days for you to get out of the Army and be home all the time, unfortunately our team may not be a good fit for you due to the extensive TDY. If you want a life of extensive travel, high adventure with a sense of teamwork and mission accomplishment along with getting qualified in a high-tech future, then we may be a great fit.
